

# Popular Pretrained Models (Category Wise)

## 1. Computer Vision (Images)

### Definition:

Computer Vision is a field of Artificial Intelligence that enables computers to understand, analyze, and extract information from images and videos, similar to how humans see and interpret visual data.

### Examples:

- Face Recognition
- Object Detection
- Medical Image Analysis
- Self-Driving Cars

Popular Models: VGG16, ResNet50, EfficientNet, YOLO

| Model                   | Use Case                                 |
|-------------------------|------------------------------------------|
| ResNet50 / ResNet101    | Image Classification, Feature Extraction |
| VGG16 / VGG19           | Image Classification                     |
| InceptionV3             | Image Classification                     |
| MobileNetV2             | Mobile & Edge Devices                    |
| EfficientNet            | High Accuracy with Fewer Parameters      |
| EfficientNetV2          | Faster Training                          |
| Vision Transformer(ViT) | Image Classification                     |
| Swin Transformer        | Advanced Vision Tasks                    |
| ConvNeXt                | Modern CNN Architecture                  |
| YOLOv8                  | Object Detection                         |

Common datasets used for pretraining: ImageNet, COCO.

## 2. NLP (Text)

### Definition:

Natural Language Processing (NLP) is a branch of AI that enables computers to understand, interpret, and generate human language in text or speech form.

### Examples:

- Chatbots
- Sentiment Analysis

- Language Translation
- Text Summarization

**Popular Models:** BERT, RoBERTa, T5, GPT

| Model         | Use Case                                |
|---------------|-----------------------------------------|
| BERT          | Text Classification, Sentiment Analysis |
| RoBERTa       | Improved BERT                           |
| DistilBERT    | Lightweight BERT                        |
| ALBERT        | Memory Efficient BERT                   |
| XLNet         | Context-Aware NLP Tasks                 |
| T5            | Text Generation, Summarization          |
| GPT Family    | Text Generation, Chatbots               |
| BART          | Summarization, Translation              |
| Sentence-BERT | Sentence Embeddings                     |

BERT, RoBERTa, T5, and GPT are among the most widely used pretrained NLP models.

### **3. Audio / Speech**

#### **Definition:**

Audio and Speech Processing is a field of AI that focuses on analyzing, understanding, and converting human speech and audio signals into meaningful information.

#### **Examples:**

- Speech-to-Text
- Voice Assistants
- Speaker Recognition
- Voice Commands

**Popular Models:** Whisper, Wav2Vec 2.0, DeepSpeech

| Model       | Use Case           |
|-------------|--------------------|
| Wav2Vec 2.0 | Speech Recognition |
| Whisper     | Speech-to-Text     |
| DeepSpeech  | Speech Recognition |

## 4. Multimodal (Image + Text)

### Definition:

Multimodal AI is an AI system that can process and understand multiple types of data such as text, images, audio, and videos simultaneously to perform tasks more effectively.

### Examples:

- Image Captioning
- Visual Question Answering
- AI Assistants that understand images and text
- Document Understanding

**Popular Models:** CLIP, BLIP, Flamingo, Gemini

| Model    | Use Case                 |
|----------|--------------------------|
| CLIP     | Image-Text Understanding |
| BLIP     | Image Captioning         |
| Flamingo | Vision-Language Tasks    |

## 5. Generative AI

### Definition:

Generative AI is a type of Artificial Intelligence that can create new content such as text, images, audio, videos, and code based on patterns learned from existing data.

### Examples:

- ChatGPT
- Image Generation

- Content Writing
- Code Generation

**Popular Models:** GPT, Llama, Gemini, DALL-E, Stable Diffusion

| Model            | Use Case         |
|------------------|------------------|
| GPT Series       | Text Generation  |
| Llama Series     | Open-source LLM  |
| Gemini           | Multimodal AI    |
| Stable Diffusion | Image Generation |
| DALL-E           | Image Generation |
